

AI GUARDRAILS & ETHICAL AI SYSTEMS

Implementing Safety and Security in Large Language Models

What is an AI Agent?

RISKS WITHOUT GUARDRAILS

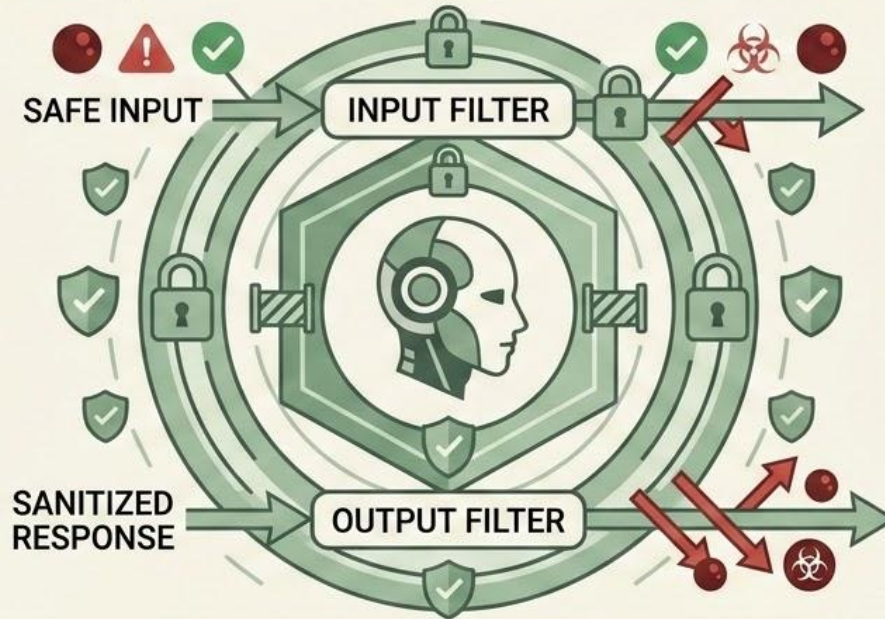

Consequences of Unchecked Large Language Model Deployment

- Unintended Bias & Fairness Issues
- Security Vulnerabilities & Jailbreaking
- Harmful Output Generation
- Privacy & Data Leakage

WHAT ARE GUARDRAILS?

A proactive system to manage LLM output and input.

ENSURES SAFE, SECURE, AND ETHICAL AI OPERATIONS.

HOW GUARDRAILS WORK

An input data flow with an imposing shield is strong and complete.

IMPLEMENTATION TIPS

Injection

```
# Define rules and load guardrail
guardrail = Rail.from_file('safe_config.rail')

# Filter input text
filtered_input = guardrail.filter(user_input)

# Check for validation results
print(f'Input: {filtered_input}')
```
